About Me

I am studying Computer Engineering at University of Tehran specializing in algorithms and computations. I design applications, develop efficient software, and analyze business strategies in the tech sector.
My lifelong passion for science and craftsmanship fuels my academic pursuits. Inspired by John Nash: **"The best for the group comes when everyone in the group does what's best for themselves and the group."**

Experiences

Software Engineer **LvtGames, Turkiye (Remote)**

Aug 2025 – Present

Gaming and Entertainment platform.

- IaC & infrastructure: Worked with GCP infrastructure and Terraform for maintenance and operations.
- Multi-tenant B2B2C: Worked with a multi-tenant B2B2C entertainment platform supporting multiple operators and jurisdictions.
- Transactions & wallet: Worked with high-throughput transaction processing and multi-balance wallet management.
- Secure microservices: Implemented secure internal microservices consumed by other teams.
- CI/CD & multi-regional: Set up Bitbucket Pipelines with change detection, selective deployment, and caching for multi-regional and international services.
- Product & Feature Ownership: At times took full ownership of specific product features, acting as Product Manager. Managed and coordinated cross-functional teams, including design and frontend, to drive the end-to-end delivery of these features—from initial concept and requirements gathering to successful launch.

Technologies: Java 21, Spring Boot 3, Go 1.24, PostgreSQL, Redis, Google Cloud Platform, Sentry, Liquibase, OpenFeign

Software Engineer **SwapWallet, Tehran**

May 2025 – Jul 2025 (3 mos)

Seamless crypto trading and more.

- Optimized a high-throughput crypto exchange system for low latency and stability under concurrent user load.
- Resolved complex concurrency issues in the core platform to ensure transactional data integrity.
- Managed feature design and flows, including developing and maintaining a key utility Telegram bot.

Technologies: Software Design, Apache Kafka, Kotlin, Kubernetes, Spring Framework

Software Engineer **Ultratrader, Tehran**

Feb 2024 – Oct 2024 (9 mos)

Smart Trading Journal & Portfolio Manager.

- Designed a high-throughput data preprocessing system for handling financial data.
- Developed APIs, GraphQL services, and integrated source code with advanced tools.
- Implemented gateways and proxies for data fetching from multiple brokers.
- Optimized database queries of time consuming tasks.
- Ensured code maintainability and scalability by adhering to clean architecture principles.

Technologies: NestJs, PostgreSQL, Redis, Docker, GraphQL, Cryptocurrency

Software Engineer **Ravindex, Tehran**

May 2022 – Dec 2023 (1 yr 8 mos)

Financial analysis platform for Tehran stocks and exchanges.
- Processed high volumes of precise financial data with optimized analysis pipelines.
- Developed microservices and worked with replicated databases and message brokers.
- Implemented over 20 Lambda functions for data fetching, processing, and presentation.

Technologies: Django, PostgreSQL, RabbitMQ, Docker, GraphQL, Web Scraping, Prometheus, Grafana

Research and Development **Plotset, California, US**

Aug 2021 – Jul 2022 (1 yr)

Simplified the process of creating charts and maps using AI with minimal coding.
- Researched technical solutions for new features and innovations.
- Designed a framework to integrate multiple charting tools into a unified system.

Technologies: Node.js, D3.js

Game Developer **Cubecraft, London, UK**

Sep 2016 – Aug 2017 (1 yr)

A leading Minecraft server network offering innovative and popular minigames.
- Developed a fully customizable, scalable, and maintainable game mode plugin for Spigot API.
- Implemented over 300 event listeners and schedulers to enhance game mechanics.
- Designed a state machine with 50+ states and 100+ transition functions.
- Debugged and enhanced low-level libraries of the core source code.

Technologies: Java, SpigotMC API, MongoDB

Education

Master of Computer Engineering (Algorithms and Computation) 2024 – Present

University of Tehran

Bachelor of Computer Engineering 2018 – 2024

Babol Noshirvani University of Technology
Final Project: Distributed UUID Generation System

Projects

LangKript
Stack: Python, Java, Minecraft, Skript, LangChain, Groq LLM
Converts natural language prompts into SkriptLang script files and automatically deploys them to Minecraft servers.

Distributed UUID Generation System
Stack: Golang, RabbitMQ, Hetzner Cloud API
A system designed to generate 32-byte UUIDs capable of handling a high volume of requests.

Awards

Golang (Bale) Software Engineering Selection 2023 – 2nd Place
DevOps (Digikala) Boot Camp Selection 2022 – Top 20
Software Engineering (Digikala) Bootcamp Selection 2022 – Top 30
CyberSecurity (Quera) Quera 2023 – Top 30
DiffCode (Quera) Quera 2019 – Top 20
611 Div. 3 Codeforces 2019 - Top 300

Certifications

Software Engineering *Digikala*

Date Earned: September 2022
Trained in backend development, API design, database management, and design patterns. Completed a soft skills workshop to enhance teamwork and communication abilities.

Machine Learning *DeepLearning*

Date Earned: March 2023
Completed an in-depth course on foundational machine learning concepts, including supervised learning, neural networks, and best practices for building ML systems.

Cybersecurity *Quera*

Date Earned: May 2023
Collaborated with experts from sensitive organizations, including the National Bank, to explore advanced techniques in web security, cryptography, reverse engineering, and other cybersecurity domains.

Skills

Programming: Experienced in Python, JavaScript/TypeScript, Java; familiar with Go and C++.
Databases: Proficient in PostgreSQL; experience with Redis for key-value storage, geospatial data, and time series applications.
Design Patterns: Practical experience in implementing various design patterns in industry projects.
Algorithms: Extensive experience in algorithmic problem solving through competitive programming platforms like Codeforces and LeetCode since high school.
Web Development: Focused on backend development and API design; also knowledgeable in frontend development, site reliability, and security.
Microservices: Hands-on experience with microservices architecture, leader/follower patterns, message brokers, and service-oriented design.
