00 PROFILE

8+ yrs EXPERIENCE | **M.Sc.** ALGORITHMS / UT | **7+** COMPANIES

Programming since 2014, from game development to competitive programming and olympiads, which built the problem-solving habits still used daily. Startup work since 2022 turns ambiguous business problems into product specs and user flows across fintech, crypto exchanges, gaming, and AI tooling, backed by distributed systems work in Figma and multi-tenant architecture. Current focus: spec-driven development and agentic and knowledge-retrieval systems, using AI to automate repetitive work so time goes to architecture and product decisions.

01 CORE ARSENAL

PRODUCT STRATEGY

User Research & Discovery | PRD Authoring | Product Roadmapping | Jobs-to-be-Done | MVP Scoping

TECHNICAL BRIDGE

Systems Architecture | API Contracts (REST & GraphQL) | Data Modeling | Technical Feasibility Analysis

DESIGN & UI/UX

Design Systems | Figma | Information Architecture | WCAG Accessibility | Tailwind CSS

EXECUTION & OPS

Cross-Functional Leadership | Feature Ownership | Sprint Cadence | Release Governance | Telemetry & Metrics

DOMAIN EXPERTISE

Multi-Tenant B2B2C | Financial Ledgers & Crypto Exchanges | AI Agent Tooling | Gaming Backends

02 PRODUCTS & OPS

Promux ↗

Go | CLI | AI Systems

Autonomous multiplexer for agentic AI CLIs with zero-downtime account rotation.

Identified quota exhaustion as a critical bottleneck halting AI engineering sprints. Scoped, specified, and shipped a zero-dependency CLI tool adopted across active engineering workflows.

Manova / Orbit Platform

TypeScript | Go | PostgreSQL | Edge

Shared foundation for client products: auth, limits, billing, and tenant isolation.

Managed the platform as a product: extracted recurring client requirements into a shared toolkit that accelerated client project time-to-market by 4x.

Dorost ↗

Typst | Open Source | Design System

Open-source bilingual document composition package on official Typst registry.

Identified the severe tooling gap in bilingual document generation; designed clean API contracts and comprehensive documentation for academic and enterprise adoption.

03 EDUCATION

M.Sc. in Computer Engineering — Algorithms and Computation

SEP 2024–PRESENT

University of Tehran

Research focus: Large language models, hallucination, and mechanistic interpretability. Thesis: Interpreting Neural Network Thoughts.

B.Sc. in Computer Engineering

SEP 2018–AUG 2024

Babol Noshirvani University of Technology

Thesis: High-Throughput Distributed UUID Generation System — Engineered a collision-free 128-bit (16-byte) distributed ID generator in Go and RabbitMQ sustaining 10,000,000 IDs/sec per node with automated node coordination.

04 HONORS

- 2nd Place — Golang Software Engineering Selection — Bale — 2023
- Top 30 — CyberSecurity Competition & Advanced Banking Security Workshop — Quera — 2023
- Top 20 — DiffCode Algorithmic Contest — Quera — 2019
- Top 20 — DevOps Boot Camp Selection — Digikala — 2022
- Top 30 — Software Engineering Bootcamp (Backend, APIs, DB Architecture) — Digikala — SEP 2022
- Certificate — Machine Learning Specialization — DeepLearning.AI — MAR 2023

05 EXPERIENCE

Software Engineer & Feature Owner
AUG 2025–MAR 2026

LvtGames — Istanbul, Türkiye

High-concurrency gaming and entertainment platform.

- Took full product and feature ownership of specific core platform features, acting as Product Manager.
- Managed and coordinated cross-functional teams (including UI/UX design and frontend) to drive end-to-end delivery from initial concept and requirements gathering to successful launch.

TECH: Go 1.24, Java 21, Spring Boot 3, PostgreSQL, Redis, GCP, Terraform, Liquibase

Backend & Systems Engineer
MAY 2025–JUL 2025

SwapWallet — Tehran

Seamless crypto trading exchange and wallet platform.

- Managed feature design and user flows for crypto exchange trading features and wallet operations.
- Designed user interactions and functional specifications for operational Telegram bot automating exchange alerts.

TECH: Kotlin, Spring Framework, Apache Kafka, PostgreSQL, Kubernetes

Backend & Data Engineer
FEB 2024–OCT 2024

Ultratrader — Toronto, Canada

Smart trading journal & portfolio manager for financial markets.

- Collaborated with financial traders to translate portfolio analysis requirements into intuitive GraphQL query schemas.
- Prioritized broker integration roadmap based on user asset distribution and transaction volume.

TECH: NestJS, TypeScript, PostgreSQL, Redis, GraphQL, Docker

Backend & Pipeline Engineer
MAY 2022–DEC 2023

Ravindex — Tehran

Financial analysis platform for Tehran Stock Exchange.

- Translated quantitative stock market analysis methodologies into automated data pipeline requirements.
- Monitored pipeline error rates and data freshness metrics to ensure SLA compliance for financial analysts.

TECH: Python, Django, PostgreSQL, RabbitMQ, Docker, Prometheus, Grafana

Research and Development Intern
AUG 2020–JUL 2021

Plotset — California, US

Research on charting tools for non-technical users.

- Researched user workflows for data visualizers to simplify chart and map creation for non-technical users.

Game Developer
SEP 2016–FEB 2017

CubeCraft — London, UK

Minecraft minigame platform.

- Built customizable and maintainable Spigot game mode plugins handling high concurrency.
- Designed state machines with 50+ states and 100+ transitions to manage complex gameplay loops.
- Implemented over 300 event listeners and schedulers to optimize real-time tick performance.
- Debugged and enhanced low-level libraries in the core Java codebase.

TECH: Java, Spigot API, PaperMC, MongoDB

Technical Product Manager & Developer
JUL 2026–PRESENT

Manova: Falak — Sari, Mazandaran, Iran

Multi-tenant operations SaaS for restaurants.

- Designed and built Falak, a multi-tenant SaaS for restaurant operations covering stock across locations, receipts with partial payments and overdue tracking, and role-based access with location-scoped roles.
- Ran requirement sessions with restaurant owners who were not technical, turning their daily routines into module specifications, acceptance flows, and architecture decisions that set each release's scope.
- Defined and verified the UX rules for staff working on phones and tablets: 390 px and 768 px checked before desktop, 44 px touch targets, full-screen flows on small screens, and Persian and English in RTL at every width.
- Modeled stock as an append-only movement ledger with row-locked atomic batches and negative-balance guards, and enforced tenant isolation with PostgreSQL row-level security (FORCE RLS) on the inventory, receipts, and identity tables.

TECH: Go, PostgreSQL, Next.js, Orbit Auth

Technical Product Manager & Developer
JUL 2026–PRESENT

Goldstein — Mashhad, Khorasan, Iran

Multi-tenant SaaS for jewelry retailers, built with a team of three.

- Co-built a multi-tenant SaaS platform for jewelry retailers to trade physical assets in real time, covering customer verification, a digital wallet ledger, live buy and sell pricing, and physical delivery.
- Ran requirement sessions with store owners who were not technical, converting them into a feature catalog, state machines, and a logged list of open decisions, with a written change process so scope moved only with sign-off.
- Built a concurrency-safe trading engine with pessimistic row locks on inventory and wallet balances, no short selling, and an append-only audit ledger for every balance change.
- Load-tested the engine and traced a cross-store slowdown (one busy store slowed others about 33× at p50) to a shared database connection pool. Sizing the pool and adding PgBouncer brought the slowdown to 1.35× in tests.

TECH: NestJS, Next.js, PostgreSQL, Prisma, Redis, PgBouncer

Head TA & Course Coordinator
2026–PRESENT

University of Tehran — Tehran

Leading teaching staff and curriculum infrastructure for competitive CS engineering course.

- Manage cross-functional TA team of 15 members; define semester roadmaps, assignment delivery schedules, and evaluation standards.
- Gather continuous student feedback to iterate on problem difficulty curves, improving project completion rates and assignment clarity.

Chief Technology Officer
AUG 2025–PRESENT

Hambazi — Boardgame & Startup Community Tehran

Startup community platform for future founders.

– Designing a platform for a boardgame and startup community.

06 CREDENTIALS

Software Engineering Bootcamp
Digikala · Sep 2022
Backend, APIs, database architecture, design patterns, cross-functional collaboration.

Machine Learning Specialization
DeepLearning.AI · Mar 2023
Neural networks, loss optimization, and engineering practices for ML systems.

Cybersecurity Advanced Workshop
Quera & National Banking · May 2023
Web security, reverse engineering, and applied cryptography with national banking specialists.
